

TechNoir's systems run **NOR-CAL's** businesses and connects it to its partners.

NOR-CAL Moving Services

Established in 1982, NOR-CAL Moving Services started as an office **mover** and has grown to become one of the largest full-service moving companies in the Western U.S. What started as a very simple business idea of providing San Francisco Bay Area businesses with superior **moving and storage** services has become the pillar to the company's success and have earned NOR-CAL Moving Services multiple awards from Allied Van Lines.

Business Challenge

NOR-CAL provides several related residential and commercial transportation services:

- Office & Industrial General Services
- National Moving & Transportation
- International Moving & Transportation
- Industrial Storage

Systems and applications were needed to plan, implement and bill for these services. For *Industrial Storage* a warehouse inventory control system was needed which was integrated into the other services provided.

In addition, it was necessary to integrate with several partner systems and other on-site systems such as accounting to seamlessly simplify business operations.

DEVELOPMENT
and SERVICES

INTEGRATION CASE STUDY

TechNoir Solution

O/I, Moving & Transportation

TechNoir designed and built applications allowing NOR-CAL to plan, manage and bill for its O/I and transportation services.

These applications incorporate robust document management, crew dispatch & scheduling, resource management and billing.

These applications are integrated into NOR-CAL's partners' systems allowing for the transparent exchange of shipments and other information.

Demo available on request

Industrial Storage

TechNoir built a system using desktop, tablet and web applications to manage inventory control and provide access to its customers.

Desktop for customer management and billing.

Tablet for warehouse inventory control.

Web for a customer portal allowing NOR-CAL's clients to manage their own inventory and items in storage.

Demo available on request

Development: All development was performed by TechNoir.

Technologies used

Microsoft IIS, ASP/ASPX, WEB API/REST, JavaScript, MS SQL Server, WPF, Azure services
